DaddaRuleKonge

This is book is made for people who collect for, or are interested in, the PlayStation 2. I made this book cause` I like to catalogue and categorize stuff, and to learn more about the system. But I am also a small time collector of the system (though the original PlayStation are (was) my primary collection).

If you are annoyed, or the owner of some of the content i used in this book, send an email to me: sennep@hotmail.com.

Similar books/PDF`s in the same format are books on NES, SNES, PSX, SMS, N64, Game&Watch, NeoGeo, including several other book in the same vein, from TMNT toys to Point and Click games.

PS2 cases variations

by: Nintendawg & Xed@playstationcollecting.com

The PS2 featured several different cases (cover boxes) versions. These are some of the variations.

All PS2 cases are made by the European company Amaray. They had a deal with Sony in 1995 to produce the 'CD Safe' for the Playstation. As such, Sony continued to use them for PS2 cases. They also make regular DVD cases. Amaray made three main case types for PS2. In Europe, discs and inserts were also made in Austria, by Sony's own pressing plant Sony DADC.

"TYPE A Black"
The original case used in PS2 launch titles and was unchanged until about 2002. Most people call these black, however they are actually a very dark navy blue. It has the memory card holder above the disc and 3 clips to hold the disc in place.

"TYPE A Blue"
After some time, DVD sales climbed steadily and Microsoft released the rivalling Xbox. This is when Sony decided to change the colour of all their cases to the now classic blue. This may have been so they could more easily stand out against the DVD video (black) and Xbox (green) titles. Otherwise exactly the same as the original launch cases in design. This is the most common case Sony used.

"TYPE B"
Then at some stage a new sort of case came out. The memory card holder was removed, probably as a cost cutting measure. In its place is just the stylized "P" Playstation logo. These cases only have two clips holding the disc and the part where one put their fingers to pry the case open has also been changed. It also has two small lots of prongs down the inside of the spine. This may have been a holder for a second disc to be slotted in. Either that or something to do with holding the manual in place.

"TYPE C"
By around 2007, Sony started releasing games with yet another design. This final design use less plastic than the previous design and may feel flimsy. The disc is held in place by an unusual 4 clip design that looks like arrows pointing towards the centre. It also has a tiny plastic ridge inside the spine. Collectors should be careful not to put anything to heavy on top of these ones.

"TYPE D?"
This is another variant. Its like the normal two clip design, but instead of the matte look all the other PS2 cases have this one is shiny. Not many of these cases were used.

Sony's platinum re-releases of top selling games come in silver (platinum) coloured cases. Depending on the age of the game the case can be either type A or B.

In addition to the standard blue and black cases there are specific games which came in unusually coloured cases. Some of these include Frosted Clear: Metal Gear Solid 2: Sons of Liberty (limited 2 disc version).White: Gran Turismo 4. Real Black (different to launch cases): Grand Theft Auto: San Andreas. Red: Buzz games. And Fluorescent Orange: EyeToy Play 3.

Video Game Lists

These pages are made for collectors, or as a index for finding the page number for a certain game. Most of the list consist of the game title, the Game-ID (found on the cover, manual and the disc), and a check box where a collector would x off what they own.

C - disc/CD/DVD/game
I - information/manual
B - Case/box/cover
S - Sealed/unopened

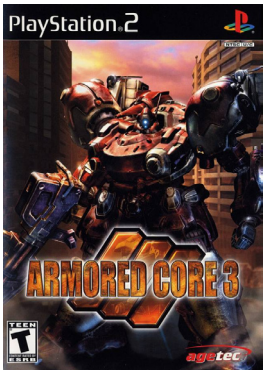
Game-IDs:
SCUS = Published by Sony Computer Entertainment US (with a few exceptions)
SCES = Published by Sony Computer Entertainment Europe (with a few exceptions)
SLUS = Third-party releases
SCED = SCEE published demos
SLES = Third/second party published games
SLED = Third/second party published demos
PBPX = In some pack-in demos and software (i.e. linux)
TCES = often used for pre-production testing discs, or trials
SLES-P = Platinum (EU)
NPUD = PS2 Classic (US)
SCUS-GH = Greatest Hits (US)
SCAJ = Often used for Asian, Chinese releases
SCKA = Mostly Korean releases

These are not all, but only some of the game-IDs

The European numbers tend to be in order from earliest to latest release.

In the US, a game was given a SLUS when it was sent to Sony for QA Test Analysts. Therefore, there are a gaps where games were given SLUS but not released. SLUS goes straight from SLUS-00001 to 157x (the last EA games). SCUS is a little different, because at various times, Sony was using the digit after the SLUS-9 to sort games by genre, but they then gave up on it. SLUS-8xxxxx are trade demos, SLUS-9xxxxx are public demos.

NTSC



These pages lists the North American normal releases.

The NTSC releases mostly used SLUS (third-party), SCUS (first-party) and the occasional PBPX for their product ID.

The box art often vary between regions (especially the Japanese versus the North American versions). In Japan, and sometimes Europe, the developers are often involved in the designing the box art. While in the West, an committee is involved in the art, including marketing, PR, 3rd party partners or manufacturing.

Special Edition

This list contains Special Editions for the North American market.

Games given a “special edition” of its original version, usually includes small bonuses, such as the inclusion of bugfixes, new game demos or soundtrack CDs, or slight improvements. PAL

The PAL library for the PS2 is huge because of the various releases made for different regions the games where released in. The changes mostly consisted of different languages for the selected regions, including region specific language for the information on the back cover. Some games where also released exclusively in one part of the regions, making collectors track down titles not released in their own region for a complete PAL set.

This list is most likely incomplete due to the huge amount of doubles.

boost mobile
The Motorola i875 is Boost Mobile's first MP3 Player handset that allows users to listen to their favourite tracks using stereo headsets or the rear audio speakers. It has external player keys, a removable Transflash Memory Card slot and even includes Roxio's Easy Media Creator software to create MP3 files from audio CD's. The Memory Card slot also comes in handy since the phone features a 1.3 Megapixel camera with 4x digital zoom and a Video Recorder to capture and store spontaneous footage.
Multi-media messaging, Text messaging, Wireless Web and Java-enabled games and applications are all supported to ensure that users get plenty of entertainment value for their money, not to mention the obligatory ringtones and wallpapers.
More technical features that the phone supports include a 600 capacity phonebook, Bluetooth connectivity, voice activated dialing, and picture Caller ID. But this phone wouldn't be complete without the Nationwide Boost Walkie-Talkie service, the digital two-way radio feature that allows users to speak cross-country at the touch of a button. This is one advantage that Boost has over the competition and is a hallmark of their "Where you at?" ad campaign.
It comes pre-loaded with demos of Tony Hawk's Underground 2 and Racing Fever 2. These choices give mobile gamers an idea of the gaming capabilities the phone offers. Presented on a large screen with good resolution, you control them via a keypad configuration that is half-recessed to allow clear navigation of the buttons.
The Motorola i875 from Boost Mobile at first glance looks conservative and doesn't necessarily "shout out" to its targeted market. Considering it's the flagship phone to its line-up of youth-oriented handsets, it could have used an edgier design but nonetheless performs solid in all functions.
Boost Mobile subscribers looking to upgrade and anyone else looking to get a full-features phone that also includes nation-wide walkie-talkie should certainly consider the i875.

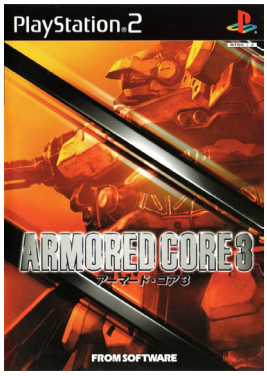
NTSC-J



The NTSC-J library includes the larges number of individual titles for the PS2. Games not received overseas where mostly board games (i.e. mahjong, iGo, etc.) and simple budget games, which would sell poorly in the west compared to the Japanese market.

The NTSC-J titles often featured different cover art for games, compared to the North American releases. These where often more stylistic or cartoonish, compared to the action based cover art for the NTSC library.

Budget Series

Simple series

The Simple series JPN are a number of series of budget-priced console games, published by Japanese company D3 Publisher and developed by a variety of companies, covering many systems. The price of the games in yen is included in the title of the series - for example Simple 2000 is about 2000¥.

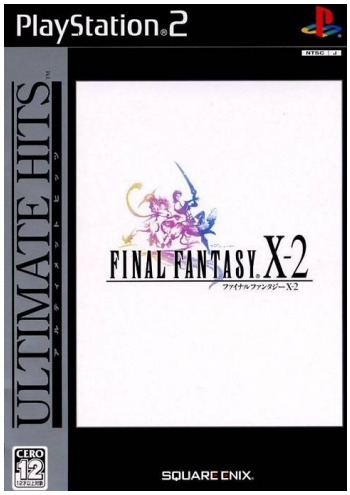
The games are usually characterised by their distinctive package design featuring artwork surrounded by a black border, with the game's title (usually prefixed by "The" in English) in a plain white font. The series name and volume are also displayed prominently.

The early games in the PlayStation Simple 1500 series were generic interpretations of common video game themes, such as mahjong, tennis or racing. However the various series now cover many more original and unusual titles in addition to those based on concepts. Since the games are almost universally created on a low budget with a short development time, developers are able to experiment to some extent with titles such as Demolition Girl, which has attracted attention largely due to its central premise of a giant bikini-clad woman attacking a city, rather than any gameplay or graphical merits.

D3 Publisher employs a number of external developers for the series, some of the most prolific being Tamsoft (of Battle Arena Toshinden fame) and HuneX - most are smaller or little-known companies, although several games have been licensed from Taito for a (usually enhanced) re-release.

Many of the PlayStation 2 Simple 2000 games have been released in PAL regions as budget titles by Midas Interactive Entertainment, Agetec or 505 GameStreet, usually under different titles and with new cover art. Additionally, several of the PlayStation Simple 1500 games were released in the US (by Agetec) and Europe (by Midas and Phoenix Games). Despite the establishment of D3 Publisher of America, the only games in the Simple series to gain a North American release are The Bass Fishing, The Genshijin and OneChanbara for the Xbox 360 and Wii.

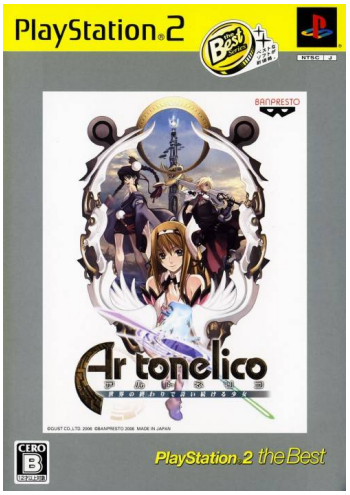
Ultimate Hits series



"Ultimate Hits" is the budget range for Square Enix. The games retain their original box art, but with an Ultimate Hits label on the left side of the package.

The series began in 2005 with re-releases of Final Fantasy X, Final Fantasy X-2, Kingdom Hearts and Kingdom Hearts Final Mix. The series also launched with the 5880 yen Final Fantasy X/X-2 Ultimate Box, which includes both FFX and FFX-2.

The Best



The Best, stylized as the Best, is a PlayStation budget range in Japan and parts of Asia.

For the PlayStation, The Best was followed by PS one Books when the PS one was released in 2001. These games were top selling popular titles that were made available again in a low-priced version under this new label. The software contained on the discs was usually the original retail game, however bug fixes were applied for a few titles. PS one Books titles were still being released until late 2006.

Mega Hits series

The "Mega Hits" series was comprised of games whose exceptional sales (more than 500,000 units) warrant their re-release at a lower price point. It was similar to the Greatest Hits series and The Best. The "Mega Hits" line dropped the more popular PS2 games to around 4,000 yen (in comparison to about 6,000 when they were first released).

Sony's South Korean release

Sony was an early pioneer in Korea. Sony Computer Entertainment Korea (SCEK) was launched in lat 2001, two months before the February 2002 launch of the PS2. By the end of 2004, the PS2 had passed the 1 million unit sales mark in Korea and with an estimated 1.27 million units sold by early 2007, the PS2 is far and away the most successful console system in Korea.

At the time Sony was in the lead in the console market in South Korea, where most figures show it holding around 90 per cent market share.

However, the market for consoles in the country was still relatively small, with the majority of the games industry in the territory being focused on the PC platform, and specifically PC online titles including massively multiplayer games and strategy games.

Sony attempted to win over gamers in Korea by converting popular PC titles - including locally created RPG Magna Carta - to the PS2.

BigHit/ PS2 Classics Series

BigHit Series are video games for the Korean Sony PlayStation 2, PlayStation 3, and PlayStation Portable consoles that have been officially re-released at a lower price by Sony and third parties that meet specific criteria. The term "BigHit series" only applies to selections in South Korea, but are the equivalent to "Greatest Hits", "Essentials", and "The Best".

The BigHit Series program was first released for PlayStation 2 on October 1, 2004 by Sony Computer Entertainment Korea (SCEK) for games that were distributed in South Korea. SCEK's official press release on September 30, 2004, stated (modified translation) that users of the PlayStation 2 hardware in Korea for the first time can purchase popular classic PlayStation 2 games, and enjoy them at an affordable cost; helping users to an existing genre preference due to several issues of being out-of-stock, or the user did not try the game.

All BigHit Series games were released at the price of 26,800KRW. Historically exchange rates dating back to October 2004 show that was slightly above 23.25$ (1 USD ~= 1147 KRW)

The translated press release by SCEK suggests that there might have been 6 games already released to PlayStation 2 owners in June of the same year; leading to 15 BigHit series games being released by the start of October 2004. The first 7 - 15 games released under the BigHit series title were : Minna no Golf 3, Gitaroo Man, Time Crisis 3, The Lord of the Rings: Return of the King, Need for Speed: Underground, SSX 3, WWE Smackdown! Shut Your Mouth, Final Fantasy X International, and Shin Sangoku Musō 2.

Sony's Chinese market

After a delayed launch, Sony's PS2 console was allowed sales in the country, early 2004, - but they cut down its distribution to two cities, Shanghai and Guangzhou, from the original five.

One of the obvious reasons of Sony's small release may have been attributed to China's rampant piracy.

Piracy and technology had made it possible for Chinese consumers to purchase a gray market PS2 and hack it to play bootleg games.

According to figures released by the Business Software Alliance, China has the second highest piracy rate globally. The industry watchdog said more than 92 percent of software used in China is unlicensed, resulting in more than $2.4 billion in lost revenue for major software vendors in 2002.4

Due to the gaming ban in 2000, Sony had to figure out how to market the PS2 as anything but a gaming console. According to former Sony China staffers, all internal and external media regarding the PS2 referred to the system as a "computer entertainment system." Games and gaming were not mentioned at all.

List of PlayStation 2 online, HDD support games

Selected games on PS2 offer online gaming or other online capabilities. Games that enable the feature provide free online play through the use of a broadband internet connection and a PlayStation 2 Network Adaptor. Since the service has no official name, it is sometimes referred as either PS2 Network Play, PS2 Network Gaming, or PS2 Online.

The service was launched in July 2001 in Japan, August 2002 in North America, and in June 2003 in Europe.

Some games allowed online gameplay using a dial-up connection (not available on all models), or LAN play by connecting two network adapters/slimline consoles together directly with an Ethernet cable or through the same router network.

Instead of having a unified online service like SegaNet or Xbox Live, online multiplayer on the PS2 was the responsibility of the game publisher and was run on third-party servers. However, later PS2 online games required the console to be authorized through Sony's Dynamic Network Authentication System (DNAS) before connecting to the server. Unofficial servers also exist which could be connected by setting up the DNS settings to connect to an unofficial DNS server. Most recent PS2 online games have been developed to exclusively support broadband internet access.

The last official online server, which was for Final Fantasy XI, was ultimately shut down on March 31, 2016, with the DNAS following it a couple of days later on April 4, indirectly shutting down several remaining unofficial servers, with the exception of ones that support non-DNAS PS2 titles such as Tribes: Aerial Assault and Tony Hawk's Pro Skater 3. Despite the DNAS shutdown, several fan created servers still exist; most require a DNAS workaround to connect, with some exceptions such as Call of Duty 3 and Need For Speed: Underground.

PAL games that supported online gaming display a WITH NET PLAY logo on their cover. North American games feature an "Online" icon in the lower right corner of the cover; on games that do not support dial-up connectivity, "broadband only" is also found on the logo.

Over time, most game servers have been shut down. However, computer programs such as XBSlink, SVDL and XLink Kai allow users to achieve online play for some PS2 games by using a network configuration that simulates a worldwide LAN.

This is a list of games that supported the online functionality of the PlayStation 2 video game console.
